

# **GEIGER** Submersible Technology

Geiger's **Patented Engineered Seal Bracket (ESB)** technology allows fuel oil pumps to keep running under flooded conditions, without sacrificing accessibility and reliability under everyday conditions.

**No expensive, bulky enclosure needed!**

**Normal Conditions:** ESB is self draining and open to air

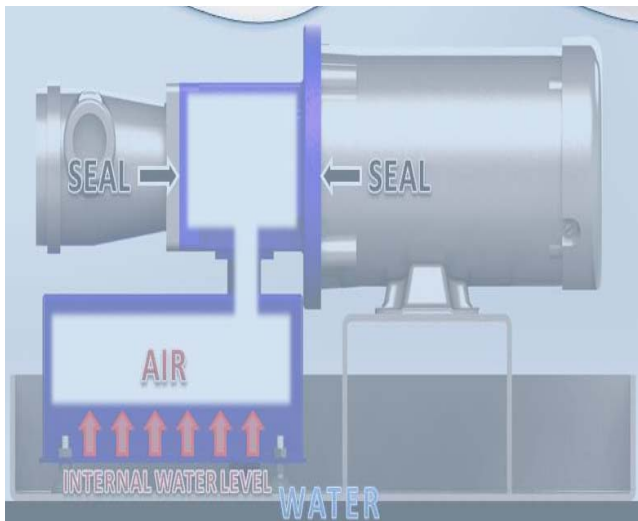

*Able to run up to 2 weeks under water*

*Open to air under normal conditions so fuel oil vapors can't accumulate*

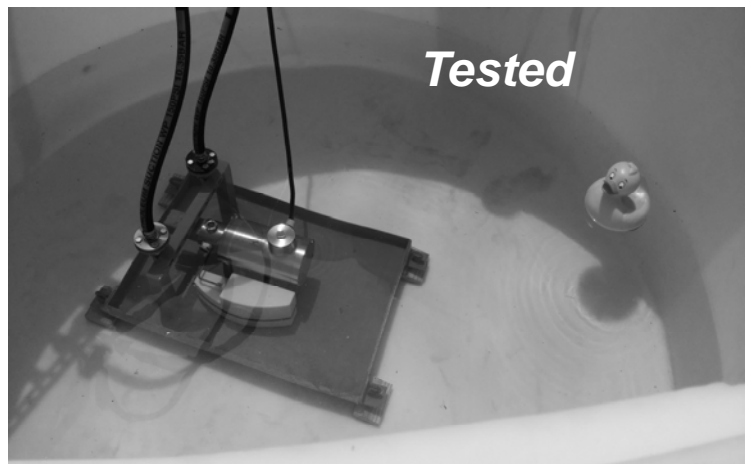

*Always ready for a flood, no modifications needed*

*Pump and motor are easily accessible for inspection, maintenance and testing*

*Fits a wide range of available pumps*

**Flooded:** The ESB is engineered to maintain an air reservoir to protect shaft seals and couplings from contact with water
